TD SYNEX Solutions Accelerate Partner Productivity

Defining the Challenge

Initially, PLEXIT was positioned to help end customer Reagro migrate from Google Workspace to Microsoft 365. Reagro employees work remotely, which presented uncertainty about the security surrounding their propriety, confidential information.

In addition to this concern, Reagro was in the process of rebranding, and leadership wanted to ensure the new brand look and feel would be visible across all workplace devices.

PLEXIT was dedicated to securing remote users and finding catch-all solutions to deliver device management, advanced reporting and productivity tools.

Exploring the Solution

The TD SYNEX team suggested a strategic approach of combining two solutions. First, Microsoft 365 Business Premium, a solution backed by best-in-class productivity, simplified device and application management and enterprise-grade security for devices and applications.

Additionally, the Modern Workplace with Secure Score Click to Run™ Solution was an ideal choice, as partners can identify risks, protect business data and safeguard user identities from sophisticated and evolving cyberthreats.

Once Modern Workplace with Secure Score and Microsoft 365 Business Premium were identified as the optimal solutions to implement, TD SYNEX offered a trial to deliver a proof of concept and further explain the plan to migrate through the help of automation.

Reflecting on the Results

PLEXIT experienced a much faster, seamless deployment with TD SYNEX's combination of Microsoft 365 Business Premium and our pre-packaged, repeatable Click to Run™ Solution – Modern Workplace with Secure Score. The solutions alleviated the overall workload and reduced deployment time in half.

Additionally, sharing features across Microsoft Office applications became more efficient, and end-users experienced improved collaboration with more secure resources and new branding visibility across all workplace devices.
