Saving Time & Boosting Workplace Security Measures in Minutes

Defining the Challenge

Questa Software Systems Private Limited was looking for a solution capable of outlining security standards to build the baseline security policies and help their customers identify possible future challenges. Providing a cost-effective and secure workplace was the end goal, as most customers were using more expensive and time-consuming third-party solutions to meet their needs.

Exploring the Solution

The TD SYNnex team presented their Solution Factory's Click to Run™ solutions to Questa Software Systems. In particular, the solution that stood out as most advantageous for deployment was Modern Workplace Secure Score because it was designed to establish a security baseline while offering insights into customers' Office 365 security postures.

Modern Workplace with Secure Score helps partners track and schedule incremental improvements over time, contributing to a long-term security plan.

Reflecting on the Results

With TD SYNnex's Modern Workplace with Secure Score Click to Run™ solution, Questa Software Systems experienced a seamless deployment that was quick and cost-effective.

Additionally, their customers were appreciative of the security policies that could be configured in mere minutes, reducing the overall project timeline and enhancing the level of security on their workspaces. The Modern Workplace with Secure Score deployment required only 20 minutes to configure and delivered favorable results 85% faster.

As a bonus, Questa Software Systems had the valuable opportunity during the deployment to showcase key technological features included with the Office 365 suite license their customers had not been leveraging previously, positioning our partner as security experts.
